## **DETAILED ACTION**

### ***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Objections***

2. Claim 3 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.
3. Claims 4-7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Quintini et al, EP 724,875.

Quintini et al, EP 724,875, discloses an emulsifying agent for cosmetic compositions comprising 0.01-10% by weight of a copolymer obtained by copolymerizing 98-80% by weight of one or more carboxylic acids containing an olefinic double bond, such as acrylic acid, 2-20% by weight of one or more vinyl esters of trialkylacetic acid, wherein the total number of carbon atoms in the acid is between 5 and 10, and 0-3% by weight of one or more unsaturated monomers as crosslinking agents, such as pentaerythritol triallyl ether (see abstract and page 3, lines 1-49), per the requirements of instant claims 1-2. Specifically, note Examples 1-2 and 5-6, which disclose emulsified detergents containing copolymer A, and further note that copolymer A is a copolymer comprised of a 90:10 ratio of acrylic acid and a vinyl ester of an acid of formula (I) having 10 carbon atoms in total, crosslinked with 0.5% of pentaerythritol triallyl ether (see page 3, lines 50-52 of Quintini et al). Therefore, instant claims 1-2 are anticipated by Quintini et al, EP 724,875.
